PROGRESS REPORT

- **What was achieved last week?**
  What was achieved last week is the midterm project and the suggestions to be integrated in the system as best practices

- **What is the focus of today?**
  The focus of today was to integrate the suggestions to be made in the system. Specifically integrating UUID, DOCU series, and Create and Update messages in the CRUD.

- **What blockers exist?**
  The blockers that existed for me is the integration of the UUID and the DOCU Series for the Primary Keys of the entities. A confusion of how to properly integrate it into my current status.

- **What went well?**
  I successfully integrated the UUID into the system and greatly understand its purpose, especially for unique IDs

- **What didn't go well?**
  I did not integrate it properly. Even though I integrate it, its not yet the proper way of integrating it. I integrated the UUID into entities that should not be there.

- **What should we start doing?**
  Follow our tasks accordingly. We are moving at a slow pace and sometimes fail to check our tasks to be completed. We should also have proper coordination, especially in the frontend and backend to make sure the proper fields are implemented and for proper checking of the PM.

- **What we should stop doing?**
  Working on a whim and not following our assigned tasks. We should not ignore our assigned tasks and follow it accordingly.

- **What we should continue doing?**
  Continue the progress we have made for now and make sure the requirements are met.
